Nov - Dec 2020: Online Course
Jan 2021: 2-Days Offline Course at TUM Campus Straubing

This advanced interdisciplinary seminar is open to Master students from Munich, Weihenstephan, Garching, and Straubing who are interested in sustainable urban development and the circular economy.
THE CIRCULAR ECONOMY IN CITIES

Towards sustainable and resilient cities

By 2050, 2/3 of the World's population will live in urban areas. Our cities account for 75% of the Earth's resource consumption, produce half of the global waste and are responsible for the majority of greenhouse gas emissions.

Today's cities follow a linear take-make-waste economy. The circular economy concept rethinks our current production and consumption patterns. It helps closing resource loops, managing resources and wastes in a more efficient and sustainable way and creating new business opportunities. This approach could provide opportunities to cities worldwide.

This seminar explores challenges, potentials and enablers of the circular economy in cities. We focus on past developments, current trends and future projections as well as initiatives to tackle cities' challenges for sustainability.
